The leaflet explains that during therapy the reaction is xpected to be unsightly in the treated areas. In some cases his may last for several weeks following cessation of treatment. Response to Efudex occurs in the following sequence: erythema, usually followed by vesiculation, erosion, ulceration, necrosis and epithelization. The leaflet points out that it is time to stop Efudex if open sores develop. Complete healing of lesions may not be evident for one to two months following cessation of therapy with Efudex.

We hope you will find these materials helpful in your practice. If you would like a supply of these patient aids, please return the enclosed postage-paid reply card. Also, please see the complete listing of adverse effects, which is included in the enclosed complete product information. Should you have any questions, please contact our Professional Services Department at 201-812-2000.
